

April 5, 2009

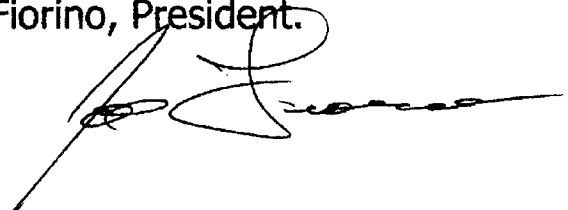

We were introduced to Zafety Lug Locks a year ago and have had great success in using them in our business. They are a very useful safety measure and our customers are pleased with the results.

After torquing wheels to 450-500 FT. LBS., we install the Zafety Lug Locks. Between services, checks are done to ensure there is no movement of wheel nuts and no extra torquing is necessary.

Customers are very satisfied with this remarkable product and the low cost to outfit a unit is a bonus. The locks can be used over and over again and this is also beneficial in keeping costs down.

We would definitely recommend this product to anyone.

Joe Fiorino, President.
